

Imperial London Hotels use Kiosk Technology to deliver public access Internet to their guests.

The Customer

Since 1837, Imperial London Hotels have offered visitors to Central London a good standard of accommodation and exceptional value for money. They have six hotels, all located in Bloomsbury, that form an ideal base from which to explore Central London and beyond.

The Challenge

Imperial London Hotels approached us looking for good quality, robust kiosks in order to give their guests a full Internet Café solution. The kiosks had to be capable of handling coins to allow users to pay for access.

The Solution

Apollo Kiosks were supplied; fitted with touch screens, stainless steel keyboards with trackerballs, all of which were designed to ensure ease of use and to enable the Imperial London Hotels guests to complete a variety of Online activities easily and independently. The Imperial London Hotels' kiosks were supplied with SiteKiosk software pre-installed allowing the kiosks to be configured to give as much control over user access levels as is required in a high footfall public environment.

The Apollo kiosk solution allows Imperial London Hotels to deliver a full range of Internet services directly to their guests. Whether users want to access the Internet freely, simply have access to a particular website, look at their e-mails or have access to local information including news, weather or sport.

The Result

“The Imperial London Hotels were looking for a simple Internet solution to compliment the free Wi-Fi access for those guests that did not have laptops and Acante provided the ideal machines for our guests needs.”

The Imperial London Hotels Ltd.
