

## Kiosk Design

Designing and creating a kiosk from scratch can be an expensive and complex thing to do. Building a bespoke prototype kiosk can also be time consuming and demanding. We have designed and built many bespoke prototype kiosks over the years, with many of these prototype kiosks rolling out into full production.

We have over thirty years experience in electronic engineering and design, specialising in the in-house design and manufacture of custom Interactive solutions including kiosks and touch screen LCD. This means that whatever the requirements functional or aesthetic - We can create a concept that fully matches your needs and environment. Our flexible and transparent design process will provide you with complete piece of mind and clarity as to the outcome of your solution. As part of our service offering we can provide the following services:

- Client Need and Requirement Discussions
- Project Brief
- Product Specification
- Concept Rendering and Form Studies
- Product Creation
- Digital Sketch Creation
- Solid Models - Engineering Drawings
- Prototyping and Production
- One Off Prototyping
- Full Production
- CAD Visualisation and Product Engineering
- Computer Generated Image (CGI) Creation

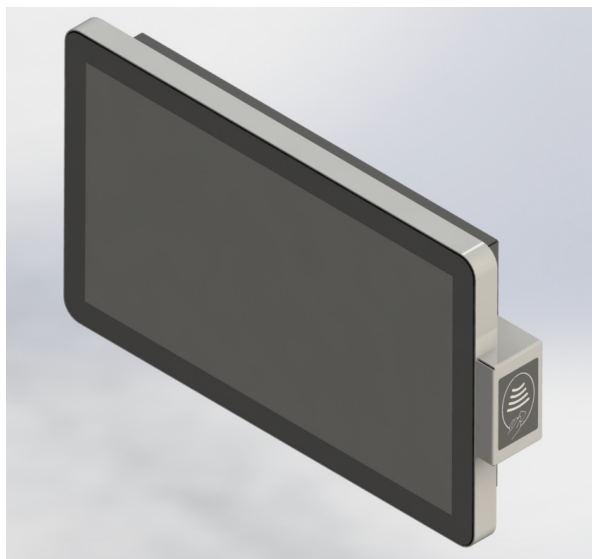

## In-House Facilities

We have extensive in-house facilities that include, 2D & 3D CAD design, electronic design, electronic and mechanical assembly, mechanical prototyping, environmental and EMC chambers and system test. We can undertake customisation tasks ranging from complete development programmes for special applications to changes in paint finish or special silk screening on standard products. The interactive repair department are also equipped to undertake the installation of 'interactive' and 'touch screen' solutions on site if required. Maintenance and installation can be provided separately and will depend on the type of cover demanded.

## Equipment Building

We use the latest modern fabrication technologies to design all of their solutions ensuring that they can select from a wide variety of components to optimise integration, access, performance and serviceability. We use high-powered engineering tools to prepare, install and build bespoke solutions. We supply and integrate all electronic components and test the operation of the systems ensuring that strict quality assurance controls are followed. The complete bespoke solution is then packaged and prepared to ship either by in house services or through agreed delivery services ensuring safe arrival of our products.
